Ph.M. Kanarev kanarevfm@mail.ru The Russian fundamental theoretical physics began its formation in the year of 1956 when its author finished the first course of the Faculty of Physics of the Leningrad State University (LSU).....Specially, I'd like to draw attention of the biologists and the chemists. I being Kanarev's pupil am aware of the fact that there is no separate discipline "chemistry" and there is no separate discipline "physics". There is a joint discipline "physchemistry of microworld", which should be studied by biologists, chemists and medical men indispensably. K.Ph.M. [Download](#)
